

Affordable Imaging Services

Affordable Medical Imaging can provide primary reporting by multiple types of approved readers.

Most of our primary readings are made by Dr. Eric Brandser M.D. A board-certified Radiologist by the American Board of Radiology can interpret our MRI scans, CT scans and Ultrasound images. Dr. Brandser has a 24 hour “turn around” time on non-emergent reports and can quickly resolve a STAT reading.

Some of our referring Chiropractors might be interested to know that we provide them initial interpretation not “over- read” by a Chiropractic Radiologist. Dr. Edward J. Dailey D.C. D.A.C.B.R can interpret our spine imaging for our Chiropractic providers and their patients. These reports are detailed to provide a template of reading that goes into the details that provide Chiropractic services what they need to thrive in their practice.

Lastly, Affordable Medical Imaging also provides primary reading from Joel Rosner M.D. Dr. Rosner provides special reads for our Podiatry providers and their patients. Much like the Chiropractic readings Dr. Rosner provides reports that are designed to provide specific information but for podiatry needs specific to ankle and feet imaging.
