

Affordable Imaging Services

Affordable Imaging Services can provide primary reporting by multiple types of approved readers.

Most of our primary readings are made by Dr. Eric Brandser M.D. A board-certified Radiologist by the American Board of Radiology can interpret our MRI scans, CT scans and Ultrasound images. Dr. Brandser has a 24 hour “turn around” time on non-emergent reports and can quickly resolve a STAT reading.

Some of our referring Chiropractors might be interested to know that we provide them initial interpretation not “over- read” by a Chiropractic Radiologist. Dr. Edward J. Dailey D.C. D.A.C.B.R can interpret our spine imaging for our Chiropractic providers and their patients. These reports are detailed to provide a template of reading that goes into the details that provide Chiropractic services what they need to thrive in their practice.

Lastly, Dr. Jack Newman is our interpreting physician for ECHO imaging. He has specialized in non-invasive cardiology since 1992. He began telecardiology in 2000 beginning with remote cardiology interpretation and expanded to echocardiograms, EKG and Holter monitors. He left private practice in 2016 to concentrate full time on telecardiology services and now works with numerous companies across 26 states providing full service remote interpretive services. His overriding philosophy has been to combine close attention to detail while concomitantly being attentive to customer care.
